

## SOMERO ENTERPRISES, INC. DONATES SOMERO® S-485 LASER SCREED® MACHINE FOR CIM AUCTION AT WORLD OF CONCRETE

The Concrete Industry Management (CIM) program is pleased to announce the donation by Somero Enterprises, Inc. of a Somero® S-485 Laser Screed® machine for the annual auction at World of Concrete.

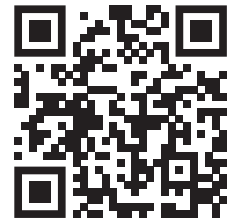

**This versatile, lightweight and powerful Laser Screed® machine is capable of raking or screeding in any direction either on grade or on most decks.**

The easy to operate Somero S-485 Laser Screed® model is a motorized 4-wheel drive, stand-on, multi-function machine capable of fine grading most subbase materials, raking concrete level, or for screeding of concrete either on grade or on most decks (level or cambered), while maintaining a constant grade by means of its automatically leveling control system which is able to operate in laser, 3D, or Sonic mode.

Available with 8-foot or 10-foot vibrator beams to work around any number of slab penetrations, the S-485 provides unmatched performance and productivity over chaired rebar or mesh, double mat rebar, ice rinks, over in-floor heat or freezer slabs. This machine is packed with numerous industry exclusive features which can only be found on Somero models including: a self-leveling head system (SLS), adjustable vibration settings, column block protection, Somero Quick GradeSet System™, soft landing, USB charging ports, a cup holder and much, much more!

**"If you want high F-numbers and can't get a large Somero machine in there, you have to use their small Laser Screeds®. The S-485 is state of the art. It is so essential; every concrete contractor should own one or more!"**

*— Steve Lloyd, industry renowned flat floor finishing expert who purchased the S-485 at a previous CIM Auction.*
